I am a Mobile Developer with 4 years of experience specializing in Flutter and React Native to build high-performance, cross-platform mobile applications for iOS and Android. I focus on delivering smooth UI/UX, optimizing app performance, and writing clean, maintainable code that aligns with business needs. While my primary focus is mobile development, I also have experience in backend and web development using Node.js and React.

Education

● KMA - Academy of Cryptography Techniques

2017-2020

- I studied at KMA (Academy of Cryptography Techniques, Vietnam), where I built a strong foundation in software development, security, and system architecture. My time at KMA has equipped me with the technical skills and problem-solving mindset to develop scalable and secure applications.

Experience

● BROWNG-TECH GROUP

03/2019 - 12/2020

Web Developer

- BROWNG-TECH GROUP was where I took my first steps into web development. It was a group of four, including three friends from my KMA cohort. Together, we worked on real-world projects, gaining hands-on experience in coding, problem-solving, and project management. This experience laid the foundation for my journey into software development.

● Golden Owl

12/2020 - 03/2025

Software Developer

- At Golden Owl, I worked as a Software Developer, starting with web development using JavaScript and React, then transitioning to mobile development with Flutter and React Native. Over time, I expanded my expertise to include backend development with Node.js, allowing me to contribute to full-stack solutions.
- During my time at Golden Owl, I worked on both company-owned products and outsourced projects, collaborating with cross-functional teams to develop scalable, high-performance applications. I gained valuable experience in Agile development, CI/CD pipelines, and optimizing application performance. This role significantly strengthened my problem-solving skills and adaptability in different development environments.

SKILLS

- Flutter
- NodeJS, NestJS
- Firebase
- ReactJS, React-Native
- Redux, Redux-toolkit, React-Query

Projects

Gig

02/2021 - 11/2023

Front-End Developer (React, React-Native)

- In the this project, I worked as a Frontend Developer, building the web application with React and the mobile app with React Native. Initially, the project used Redux-Saga for state management and API handling, but we later migrated to React Query for improved performance and better API data synchronization.

Golden Owl's Products (Clinger, Morning Bird)

All free time

Fulltask Developer (NestJs + Flutter)

- I worked as a Frontend Developer, where I initiated the project, set up the configuration, and built key functionalities using Flutter to develop both mobile and web applications. I also leveraged Firebase services to handle the backend, ensuring a seamless integration between the frontend and backend systems.

Wile

08/2022 - 08/2023

Mobile Developer (Flutter)

- I worked as a Frontend Developer. I initiated the project, handled the configuration, and built key functionalities using Flutter for both mobile and web platforms. I leveraged Firebase as the backend service. Initially, I implemented chat features using GetStream, but later rebuilt the chat functionalities to integrate them with Firebase. I also utilized Cubit for state management.

Marshmallow

09/2023 - 11/2023

Mobile Developer (Flutter)

- I worked as a Frontend Developer on a freelance basis through Upwork. I was responsible for developing new features, and the project utilized Riverpod for efficient state management.

RealLaunch, RealAgent

11/2023 - 10/2024

Mobile Developer (Flutter)

- I worked as a Frontend Developer using Flutter and Cubit for state management. Since the backend uses GraphQL, I integrated graphql_flutter for querying data, and I utilized Mapbox for mapping functionalities. In this project, I maintained and developed the app, continuously building new features and ensuring smooth performance.

Aitis

11/2024 - 01/2025

Mobile Developer (React-Native)

- I worked as a Frontend Developer using React Native. I focused on building new features and updating the UI, and I utilized Redux-Saga for state management and handling API calls.

BiiB

01/2025 - 03/2025

Mobile Developer (React-Native)

- I worked as a Frontend Developer using React Native and Redux-Saga to manage state and handle API calls. I replaced Google Fit with Health Connect to read step count data on Android devices, while integrating Apple Health on iOS devices and HUAWEI Health on Huawei devices.
